

ALVARO TORRES

FULL-STACK SOFTWARE ENGINEER

Edinburg, TX – Open to Relocation | alvaro@alvarotorres.dev | alvarotorres.dev | linkedin.com/in/alvarotorrestx | github.com/alvarotorrestx

SUMMARY

Product-minded full-stack engineer with fintech experience and a focus on automation, workflow optimization, and applied AI. Skilled in React, TypeScript, Python, FastAPI, PostgreSQL, and API development, with experience building software that improves operations, supports decision-making, and turns business challenges into practical technical solutions.

SKILLS

Languages: Python, JavaScript, TypeScript, C++, Java, PHP, HTML/CSS

Frontend: React, Next.js, Tailwind CSS, Vite

Backend: FastAPI, Node.js, Express.js, REST APIs, JWT Authentication, Redis

Databases: PostgreSQL, MongoDB, MySQL, Firebase, Firestore, Supabase

Data & AI: Pandas, TensorFlow, Keras, scikit-learn, OpenAI API, Weaviate, Google ML Kit, Power BI

Cloud & DevOps: Docker, Vercel, Railway, Git, GitHub, CI/CD, Postman, Jira

EXPERIENCE

Contact Center Operations Specialist

Remote

Finance of America

September 2025 – Present

- Analyze contact center performance metrics and operational trends to identify service gaps, staffing challenges, and call-routing issues, providing actionable insights to customer service, sales, telecom, and executive stakeholders.
- Lead Workforce Management (WFM) operations within Genesys Cloud for the Customer Service department, managing staffing strategies, scheduling, and workforce planning that support service-level goals above 90%.
- Partner with customer service leadership, telecom, and Salesforce teams to identify operational issues, coordinate resolution efforts, and improve agent workflows.
- Develop reporting and automation solutions using Excel, advanced formulas, pivot tables, charts, VBA, and Python to improve data accuracy and reduce manual effort.

Customer Service Representative, Finance of America, January 2024 – September 2025

Freelance Web Developer (alvarotorres.dev/projects/simulint_innovations)

Remote

Simulint Innovations

June 2021 – Present

- Design, develop, and maintain custom websites and business solutions across Shopify, Wix, Squarespace, Webflow, and WordPress, delivering solutions for 7+ client projects.
- Develop custom JavaScript functionality, API integrations, lead capture workflows, and business process automations that improve operational efficiency and customer engagement, contributing to a 20% increase in lead conversions across client websites.
- Optimize website performance, SEO, responsiveness, and user experience, improving site speed and overall performance by 30%.

Director of Marketing & IT (alvarotorres.dev/projects/hacienda_mobile_home_sales)

San Benito, TX

Hacienda Mobile Home Sales

July 2021 – January 2024

- Managed marketing and IT workflows, partnering with leadership and property managers to improve business processes, website operations, and customer engagement.
- Redesigned and migrated the company website from a legacy PHP/MySQL platform to Wix using JavaScript and Velo, improving site performance, user experience, and reducing content update time by 60%.
- Built an automated inventory pipeline using Excel VBA to retrieve mobile home data and convert it to JSON for live site updates, eliminating manual entry errors and improving data accuracy.

PROJECTS

ClassmateAI · React · Tailwind CSS · FastAPI · PostgreSQL · SQLAlchemy · Gemini AI

alvarotorres.dev/projects/classmateai

- Built a full-stack AI study platform that enables students to upload documents and generate notes, flashcards, quizzes, and study guides using React, Tailwind CSS, FastAPI, PostgreSQL, SQLAlchemy, and Google Gemini AI.
- Engineered secure authentication and account workflows, including JWT login, session persistence, email verification, and user settings, to support a scalable multi-user platform.
- Developed engagement and collaboration features including progress tracking, gamification, content export, and public sharing workflows to improve study retention and content accessibility.
- Collaborated in weekly Agile sprints using Jira to deliver frontend, backend, and database features within a production-ready capstone environment.

PulseDesk · Python · FastAPI · React · PostgreSQL · Scikit-learn · Tailwind CSS

alvarotorres.dev/projects/pulsedesk

AI-powered call intelligence platform developed to demonstrate contact center analytics and automation use cases for Finance of America technology leadership.

- Built an AI-powered call intelligence platform that processes call center audio and transcripts to surface sentiment, compliance risks, and coaching opportunities from customer interactions.
- Engineered transcript-processing and rule-based scoring workflows using Python and FastAPI, combining Whisper transcription with compliance logic to identify high-risk conversations and key operational insights.
- Developed a full-stack architecture with PostgreSQL, custom APIs, and alerting workflows designed to surface high-risk interactions and improve operational visibility within contact center environments.
- Created a modular React and Tailwind CSS dashboard featuring transcript highlighting, severity tagging, and conversation-level analytics for rapid review of customer interactions.

SkipAPI · Next.js · TypeScript · Express.js · MongoDB · Redis · OpenAI

alvarotorres.dev/projects/skipapi

- Built a full-stack AI SaaS platform that uses OpenAI to generate backend APIs from natural language prompts, significantly reducing manual backend setup and accelerating frontend integration workflows.
- Implemented secure authentication with JWT and refresh tokens, protected routes, and Redis-based rate limiting to support controlled and secure platform usage.
- Developed a Next.js and TypeScript application with real-time feedback, session persistence, and structured API generation workflows to improve platform usability and developer experience.

DevConnect · React · Express.js · MongoDB · Node.js · JWT

alvarotorres.dev/projects/devconnect

- Built a MERN full-stack social platform using React, Express.js, MongoDB, and Node.js, with JWT authentication, role-based access control, and scalable application architecture.
- Engineered backend services using Express.js, MongoDB, Mongoose, and RESTful APIs within an MVC architecture, leveraging Postman for testing and debugging to ensure reliability and maintainability.
- Led an open-source community of 11+ contributors through GitHub and Discord, coordinating feature development, code reviews, issue tracking, documentation, and contributor collaboration to support project growth.

EDUCATION

Bachelor of Science in Computer Science – Artificial Intelligence (B.S.) , Full Sail University	July 2026
Associate of Science in Computer Science (A.S.) , Full Sail University - Valedictorian	June 2025
